Health Canada has completed their revisions and changes to the format and content of the Disinfectant Drug guidance document with implementation targeted for October 29th, 2007. Changes to the document include revisions to specific Category IV monographs which will now only be located within the overall Disinfectant Drug document. The changes also reflect the jurisdictional changes that resulted from the amendment of the Pest Control Products Regulations on September 12, 2001 as related to Disinfectant products. While the TPD have generally been following the interpretation and policy as outlined in the revised guideline, they do indicate that any submission that is reviewed before October 29th, 2007 will be granted any applicable interpretation found in the previous version of the guideline.
